

# TMR7503-B

## Unibody Low Temperature-Drift Current Sensor

### Description

TMR7503-B is an open loop current sensor for accurate measurement of DC, AC, pulsed current and arbitrary waveform current with galvanic isolation between primary and secondary circuit.

### Features and Benefits

- Low temperature coefficient
- High immunity to external interference
- Galvanic isolation
- Excellent linearity
- Light weight and compact
- RoHS & REACH compliant

### Applications

- DC motor drives
- Inverters and variable frequency drives (VFD)
- Uninterruptible power supplies (UPS)
- Communication power supplies
- Battery management system (BMS)
- Switching power supplies
- Power supplies for welding application

### Selection Guide

Model	Primary Nominal Current	Primary Current Measuring Range
TMR7503-0500B	50 A	±150 A
TMR7503-1000B	100 A	±300 A
TMR7503-2000B	200 A	±600 A
TMR7503-3000B	300 A	±900 A
TMR7503-4000B	400 A	±950 A
TMR7503-5000B	500 A	±950 A
TMR7503-6000B	600 A	±950 A

### Insulation and Environmental Characteristics

Parameters	Symbol	Typical	Unit
Dielectric Strength	$V_D$	5	kV(50Hz, 1min)
Insulation Resistance	$R_{IS}$	1000	MΩ
Creepage Distance	$d_{CP}$	7.7	mm
Clearance	$d_{CL}$	4.8	mm
Ambient Operating Temperature	$T_A$	-40 to +105	°C
Ambient Storage Temperature	$T_{STG}$	-40 to +105	°C
Mass	m	61	g

## Catalogue

## 4. Parameters Definition And Formula

### 1) Output Voltage

$$V_{OUT} = V_{OE} + S \times I_P$$

$V_{OUT}$  stands for current sensor output voltage at given primary current,  $V_{OE}$  stands for offset error,  $S$  stands for sensitivity,  $I_P$  stands for primary current.

### 2) Accuracy

$$X_G = \max_{I_P \in [-I_{PN}, I_{PN}]} \left( \frac{V_{OUT} - (S \times I_P)}{S \times I_{PN}} \times 100\% \right)$$

$I_{PN}$  stands for nominal primary current

### 3) Sensitivity

$$S = \frac{V_{OUT(@ I_{PN})} - V_{OUT(@ -I_{PN})}}{2 \times I_{PN}}$$

$V_{OUT(@ I_{PN})}$  and  $V_{OUT(@ -I_{PN})}$  stand for the voltage output at  $I_{PN}$  and  $-I_{PN}$  respectively.

### 4) Linearity

$$\varepsilon_L = \max_{I_P \in [-I_{PN}, I_{PN}]} \left( \frac{V_{OUT} - (\bar{V}_{OE} + \bar{S} \times I_P)}{S \times I_{PN}} \times 100\% \right)$$

$\bar{S}$  and  $\bar{V}_{OE}$  stand for the average values of the sensitivity and offset error.

### 5) Symmetry

$$\varepsilon_{SYM} = \left| \frac{V_{OUT(@ I_{PN})} - \bar{V}_{OE}}{V_{OUT(@ -I_{PN})} - \bar{V}_{OE}} \right| \times 100\%$$

### 6) Hysteresis

$$V_{OH} = \max \Delta H$$

$\Delta H$  is the maximum residual voltage between full scale positive and negative nominal current.

## 5. Application Information

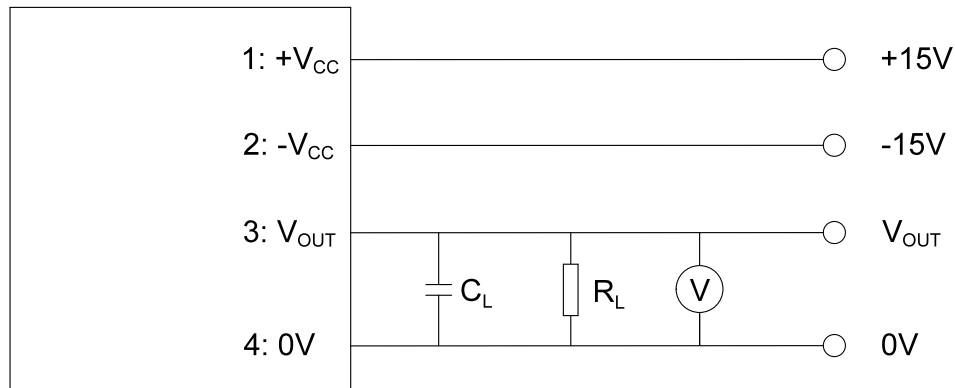

Figure 17. Connection diagram of TMR7503

### Mounting Recommendation

1. Mounting method: Choose one of 3 × Φ 4.5 mm holes  
1 × M4 copper or SS304 screw (recommended applied torque 0.75 N•m)
2. Primary through-hole dimensions: 20 mm × 10 mm
3. Secondary terminal: Molex 22041041 (previous 5045-04A series)  
Crimp Housing: Molex 22011042, Crimping Terminal: Molex 08500113

### Remarks

1.  $V_{OUT}$  is positive when the primary current is in the same direction as the arrow indication on the label and vice versa.
2. Improper connection can cause permanent damage of the sensor.
3. Excessive capacitive load may cause the distortion of output signals when the primary frequency is too high. Please refer to Figure 4.
4. Sensor is customizable upon request.
5. Dynamic performances ( $di/dt$  and response time) are best with a single busbar completely filling the primary hole.

## 6. Dimensions

Figure 18. Sensor outline (unit: mm, tolerances for unmarked scales  $\pm 1$  mm)

Information furnished herein by MultiDimension Technology Co., Ltd. (hereinafter MDT) is believed to be accurate and reliable. However, MDT disclaims any and all warranties and liabilities of any kind, with respect to any examples, hints or any performance or use of technical data as described herein and/or any information regarding the application of the product, including without limitation warranties of non-infringement of intellectual property rights of any third party. This document neither conveys nor implies any license under patent or other industrial or intellectual property rights. Customer or any third-party must further determine the suitability of the MDT products for its applications to avoid the applications default of customer or third-party. MDT accept no liability in this respect.

MDT does not assume any liabilities of any indirect, incidental, punitive, special or consequential damages (including without limitation of lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory. Notwithstanding any damages that customer might incur for any reason whatsoever, MDT's aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the terms and conditions of commercial sale of MDT.

Absolute maximum ratings are the extreme limits the device will withstand without damage to the MDT product. However, the electrical and mechanical characteristics are not guaranteed as the maximum limits (above recommended operating conditions) are approached. MDT disclaims any and all warranties and liabilities of the MDT product will operate at absolute maximum ratings.

Specifications may change without notice.
